“Truck-stop operator [TravelCenters of America](#) Inc. is stepping up its alternative-energy game as tougher regulations push the commercial transport sector to look beyond diesel fuel.

“TravelCenters, the largest publicly traded U.S. truck-stop company, said Thursday it is forming a new business unit called eTA that aims to eventually supply drivers with alternative energy across much of its nationwide network of 270-plus locations.

“The rollout is starting in Southern California, where TravelCenters will work with electric-truck maker [Nikola](#) Corp. to install hydrogen fueling sites for heavy-duty trucks at two locations. The company also plans to install FreeWire Technologies Inc. electric-vehicle charging stations for automobiles at some facilities in the state along Interstate Highway 5.” **Read more at:**
